GDP is the acronym for Gross Domestic Product

It refers to the income accumulated by a country from sales of goods and services in a given period, which is usually a quarter, a semester, or a year.

It measures the production of goods and services carried out by the country's residents (within the borders) minus the consumption of intermediate goods and services (those that were consumed in order to produce).

Income is calculated based on what is generated by natural and legal persons who live within the country, regardless of their nationality or country of origin of the company.

GNP is the acronym for Gross National Product

A macroeconomic value to measure the income generated by the sale of goods and services made by natural and legal persons that live in the country, regardless of their nationality or the origin of the company.

The GNP is responsible for measuring the production of nationals.

GDP will be higher than GNP in countries with a large presence of foreign capital.
